

Design your own board game!

On the next page is a board game for you to print out and play! If you don't have a printer you can make your own. Here is how:

- Grab some paper and drawing materials.
- Draw out your board game on the paper. You can make it look like mine or different.
- Colour in each square. I repeated blue, yellow, red and green.
- Add the START and FINISH.
- Now for the fun bit! Make up actions for some of the squares. I have both good and bad actions. The good actions let you move forward. The bad actions either send you back or skip a turn.
- What good and bad actions can you come up with?
- For another challenge you can also make cards. The cards can be used if you land on a certain colour. Cards can have actions like;
 - swap places with another player
 - skip a turn
 - go back however many spaces you rolled on the dice
 - have a double turn
 - double the number on the dice and go forward
 - the cards could also have questions that the player has to get correct to move forward. The questions could be a math problem, like what is 5×7 ? If the player gets it wrong they skip a turn or move backwards.
 - what other actions can you come up with?
- Make a dice and counters for players and have fun!

If you want to make your own dice, try drawing it out on paper with a ruler. Make sure each square is the same size. For example 5cmx5cm.

Colour and cut out the counters for each player.
