

Colour Changing Flowers

Did you know you can change the colour of a flower using food dye? Here's how.

What you need:

- a fresh flower from your garden
- vase
- water
- food dye

What to do:

1. Pick a fresh flower from your garden. This experiment works best on white or light colour flowers.
2. Fill a vase with water and add a few drops of food dye.
3. Check your flower each day to see if it has changed colour. With my flowers they had changed to a light blue/green by Day 4 and didn't get any darker after that.
