

Art Time!

What can you see?

Grab some paper and all your drawing supplies! Today we are going to see how colours appear different on black paper compared to white paper.

What you need:

- pens, pencils, pastels, crayons, textas, paints, chalk, whatever you have to draw with.
- white paper, black paper, coloured paper.

Have a look at my examples on the next page. I used oil pastels, metallic oil pastels, fluoro oil pastels, textas, metallic textas, colour pencils and watercolour paints.

What can you see?

- All colours are brighter on the white paper.
- The metallic textas look silver on black paper.
- You can't see the colour textas on black paper..
- The watercolour paint only showed on black paper when it was dry.

If you don't have black or coloured paper try colouring in a section of paper with black pencil or texta. See how colours show up on the black coloured section.

So go work on your next masterpiece!

Don't forget to share your creation with the [Holiday Activities Gallery](#).
