

Shaving Cream Clouds

Using food dye and shaving cream we are going to make some awesome colourful rainclouds!

What you need:

- Clear cup or jar
- Shaving cream
- Food dye
- Water
- Plate

What to do:

1. Sit the jar on a plate. This is to protect your work surface from food dye running down the glass and staining the bench! Fill the jar 3/4 with water. Add shaving cream on top to fill up the jar.

2. Add drops of food dye all over the shaving cream cloud. You are going to want to use a good amount of food dye so the colour soaks through the cloud.

3. Watch the colour make its way through the cloud into the water below. If the colour is not soaking through the cloud, pour a little bit of water on top of the colour.

Have a look at the pictures from my experiment. See how all the colours are slowly mixing in the water? Take a picture of your raincloud and upload to the [Kids Club Online Gallery!](#)
