

GROW A TOMATO

Did you know you can grow a tomato plant from tomato seeds? Here is how!

What to do:

1. Cut a tomato in half and scoop out the seeds onto paper towel.
2. Leave the seeds to dry for a week.
3. Cut the paper towel around the seeds and plant the whole thing into a small pot. Give the pot a little water. Don't water it too much or the seeds will drown. Place the pot in a sunny spot outside.
4. Water the spot a little once or twice a week. You can see if the soil looks dry. When it is very hot the soil will get thirsty!
5. In about two weeks, little shoots will appear! In another couple of weeks, they will grow bigger! Watch your tomato plant grow. When it gets a lot bigger and taller, you will need to transplant it to a bigger pot so the plant can grow bigger.
6. Take photos of your tomato plant and show us how big it is on the [Kids Club Online Gallery](#).
