

# Tissue Rose

## What you need:

- Tissues
- Pipe cleaners
- Scissors

## What to do:

- Layer 6 tissues on top of each other. Fold in a zig zag shape from one end to the other.
- Gently cut the pile in half **\*May need an adult's help.**
- Face your folds towards each other.
- Using a pipe cleaner, place it between the 2 tissue piles.
- Using another pipe cleaner, tightly wrap it around the bottom, twist it around itself to keep it tight.
- Spread your zig zag tissues apart. (See photos below)
- Each individual tissue has 2 layers, gently start peeling those layers apart, starting from the centre and working your way out.
- Work your way through both sides of the flower, it will become quite fluffy.
