**Instructions:** Find the underlined words in the above word search.

The Great Barrier Reef was formed more than 20 million years ago. It is located to the north-east of the Australian coastline. The reef is home to thousands of species of marine life, including sharks, whales, dolphins, crocodiles, fish, dugongs, turtles, sea snakes and birds. Tourists flock to the reef to go diving and snorkelling. The reef is vulnerable to both man-made and natural threats.
