

# BEE HIVE

## What you need:

- Pencils/ Textas
- Scissors
- Glue

## What to do:

- Print the following page. Colour in the bee hive.
- Inside the hexagons, write and draw the different stages of the life cycle of a bee (Egg, Larva Pupa and Bee).
- Cut out the hive and hexagons.
- Glue the hexagons together in the order of the life cycle.
- Glue the first and last hexagons to the each of the bee hive halves.
- Once the glue is dry, fold the hexagons in on themselves so you can bring the 2 halves of the bee hive together. This way, when you pull the hives apart, you will see the life cycle.
