

DESIGN YOUR OWN LIGHTSABER

You will need:

- Paper
- Glue/sticky tape
- Pencils/textas

What to do:

1. Colour in two pieces of paper with the colour of your light saber crystal. You don't need to colour in all the paper because you will roll it up later.
2. Design your metal handle.
3. Roll up one of the pieces of paper to make the blade. Tape it together so it stays rolled up. Then tape the second piece of paper to the blade and roll that up. Secure with more tape.
4. Roll the paper with the handle design over one end of the blade and attach with tape.
5. You now have a lightsaber! Show us a picture on the [Kids Club Online Gallery](#).

Lightsaber Facts.

How are lightsabers made?

- A lightsaber has a plasma blade powered by a kyber crystal.
- Kyber crystals lack colour until a young Jedi chooses a crystal then the colour would change depending on the Jedi's personality.
- Most change to blue or green. Though there has been purple, yellow, white or black lightsabers.
- Black is one of rarest colours. One is known as the Darksaber. It was created by Tarre Vizsla who was the first Mandalorian to be part of the Jedi Order.

Why do the Sith have red lightsabers?

- The Sith cannot bond with a kyber crystal like the Jedi.
- Instead the Sith pour their negative emotions like anger and hate into the crystal which makes it turn red.
