

3D Hand Optical Illusion

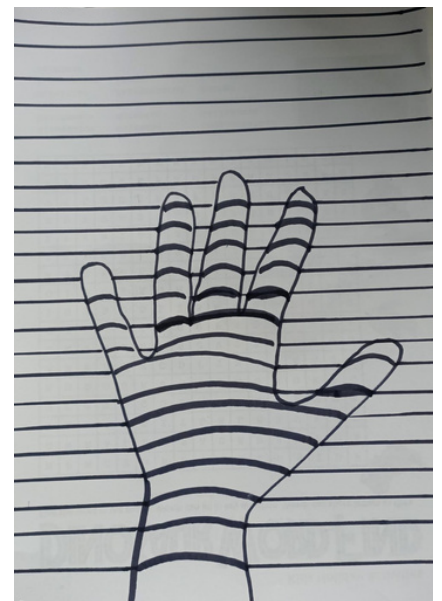

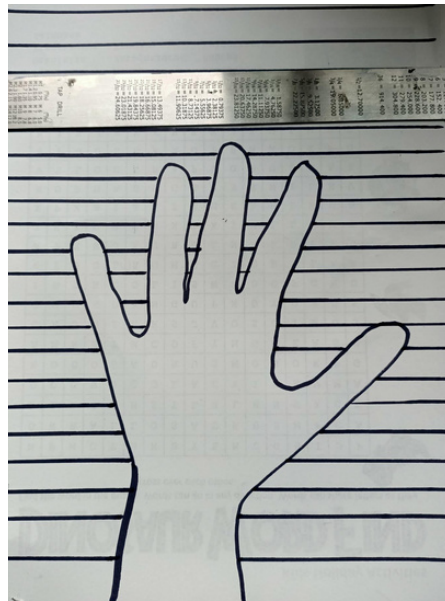

What you need:

- Paper
- Pencils/Textas
- Black texta
- Ruler

What to do:

1. In the middle of the paper, draw around your hand and wrist in black texta.
2. Draw straight horizontal lines using the ruler across the paper, but not on the hand print.
3. Draw curved lines on the handprint, with the edges of the lines matching up to the straight lines.
4. Colour in the lines using a pattern
5. The curved lines on the hand make the optical illusion work. It looks like the hand is 3D and coming out of the page.
