

BLOW UP A BALLOON WITH SCIENCE

What you need:

- Balloon
- Empty soft drink bottle
- Bi-Carb soda
- Vinegar
- Cotton bud
- Funnel

What to do:

- Take an empty soft drink bottle and pour approximately one inch of white vinegar into the bottom. (You may want to use a funnel for easy pouring. Just be sure to rinse it off and wipe it clean before you use it again.)
- Use your funnel to put some baking soda into the balloon. You may need to use a cotton bud to push it through.
- Attach the balloon to the top of the water bottle but be careful not to dump the baking soda in yet.
- Turn the balloon over and let the baking soda fall into the vinegar at the bottom of the water bottle.
- You will see the balloon begin to expand and fill up.

Show us what you have made on the [Kids Club Online Gallery](#).
