

3D Art Optical Illusion

The curved lines in this drawing make it look like it is 3D and coming out of the page.

What you need:

- Paper. I like to use thicker paper when I create art.
- Pencils/textas. I like to use permanent markers.

What to do:

1. Lightly sketch out your design on paper using greylead pencil. That way you can rub out any mistakes. I started with a dot in the middle of the paper and drew curved lines from the middle to the edge of the paper.
2. Draw curved lines in each section, like I have in the picture.
3. When you are happy with your design, go over your sketch with black, wait a couple of minutes for the ink to dry before you rub out the pencil sketch.
4. Colour in the sections using different colours in a pattern. I used red, orange, yellow, green, blue, magenta and pink.
5. Colour in the other sections in a black and white pattern. This adds contrast to the colours and make them pop off the page.

Show us what you have made on the [Kids Creations Gallery](#).
